**UNIT – 5**

**TASK 9 – Junit Test Case**

**CODE:**

```
package junitDemo;

public class Calculator {

    public int add(int a, int b) {

        return a + b;

    }

    public int divide(int a, int b) {

        if (b == 0)

            throw new IllegalArgumentException("Division by zero");

        return a / b;

    }

}
```

**PROOF:**

**CODE:**

```
package junitDemo;

import static org.junit.jupiter.api.Assertions.*;
```

```
import org.junit.jupiter.api.Test;
class CalculatorTest {
    Calculator cal = new Calculator();
    @Test
    void testAddition() {
        assertEquals(30, cal.add(10, 20));
    }
    @Test
    void testDivision() {
        assertEquals(5, cal.divide(20, 4));
    }
    @Test
    void testDivideByZero() {
        assertThrows(IllegalArgumentException.class,
                () -> cal.divide(10, 0));
    }
}
```

**PROOF:**
